How do Unrelated Ideas Cohere? ?

LITERATURE

PARATAXIS

PARA : SIDE BY SIDE

HYPOSTAXIS

TAXIS : TO ARRANGE

within the Scope of Syntax, there is found H. and P.

P: a way of making independent clauses

→ INVOLVEMENT OF RELATION, IF CONNECTION IS MADE

LOGICALLY OR ILOGICALLY → HYPOSTAXIS

P can be vertical or horizontal, or 3d as in conifer

P = UNIT. Paragraph, sentence, phrase (comma), word, phrase.

Usually defined by the writer. But not made for common communication

P: as a list is impoverished. (C. Angel)

Perhaps most interesting as P → HYPOSTAXIS

3. 18. 90

"abstract" generalizes

but "practical" borders too the relationship between two objects

See original Greek meaning

More than the literary usage

Pare - side by side

Taxa - to arrange

But also, implies (in new use of the word) a non-logical connection
The illogical connection necessary to bring understanding into proactive literature is related to the maximum necessary to her sublimation in x - opposite type connections. What is susceptibility by language?

I grasp here for a reason: there was no solution then I will give.

One consideration is that of the supervision window; for me it works this way: fine, more communicative, more filled with information, supervision occurs when my consciousness is focused only on the other instruments and my instrument. Here, distinctions of inner thoughts or criticisms is disastrous.

If focused, I don't mean that I am thinking about my and the other instruments; thought takes too long. There is a faster route directly from ear to head. There is also (and this is important) less inertia involves route, less resistance to change (word, tempo, instrument, rhythm).

It is difficult because the thought center (e.g.) needs so badly to participate, to use its own (linear) decision process. That the conscious process can be sped up... a model more dependable with practice, or used to form a hybrid with the unconscious process. A fundamental step would be to eliminate all sections of the conscious that are not needed (for example, thoughts about previous actions might not be needed in a particular situation). It could then be streamlined to operate faster and with less stress. It could then be a matter of separating out which elements will be processed (decision made) by the unconscious and which will be processed by the conscious before red hand (or daring, suppose, though this being the play them into the music a burdensome conscious decision).

1.6.70 composition

PARATAXIS

That which was little nothing to grasp on easily.

I suppose patterns but they are not simple or familiar. A lack of familiarity should confuse pattern breaking and automatic response, in a subtle way (automatic response is a gross way is, for example, not to listen to without a familiar pattern, even this can be sublimated, however, while using the above four currently being discussed.)

2. Music that is not abstract, is not abstract, may be abstract in certain elements, e.g. instrumentally or timbrally.

I have often worked with pattern music where, computationally, the most interesting component is timbral or sub-harmonic alteration of an abstract and subtly variation of a repetitive dominant rhythm.

3. Distinction must be made between that which is abstract and that which is simply observed. It is a matter of intent (where the composition must not be judged on its success in communing, even abstract communing) and information (content).

CLUSTER VALIDITY PROBLEM

GROUPING for examination.
1. Connections between objects. Not the many produced by them — though acknowledged must be made of a reason for perceiving a connection.

But an examination of why some of these connections might occur and some parallels of similar connections in other fields.

Is this an intention or a deviation from Jenny's idea in sense?

My original question is: Why do two sounds go together even though there relationship is not explainable by traditional (i.e. harmonic, mental, etc) methods?

First of all, it is a subjective decision whether the two sounds go together or not. For arguments sake, that one.

This rules out the discussion of any two particular events.

For this discussion, it is assumed that two events exist some of which go together in this way for completion.

PHYSICS

"Since physics presupposes the minds of observers, these minds and their properties cannot be explained in terms of physics."

"Causality holds at every finite instant, but it does not carry over a sequence of knowledges. Somewhere or other, this initial knowledge of a system becomes involved."
Form + Energy

\[ F = \frac{1}{\varepsilon} \]

Law PE → Stability

What does "energy" mean in music.

Form cannot be predicted from its parts.

Topics 2.

- Parataxis
  - illogical (not causal?) connection between objects
  - lack of causality may indicate the necessity of probability & density

- Grouping (group)
- Reflex

Novel note: For instance, "knowledge at potential cognitive level."

"Analysis by decomposition of the brain by other networks might reveal aspects of the process that are unique to human interaction in very different cultural contexts." — Boecker, p. 32

Is it possible to check if the class is one or the class into one?

- Causality

Page 2: "Causality holds at every single instant, but it does not carry over a sequence of branching. Without data, the initial knowledge of a step becomes irrelevant."

"At every new stage of organization, new rules, the effect" p. 3
